

NOBADRAPE[®] variables Lochtuch

Product Description and Purpose

The 2-ply green drape consists of two equal parts which can be arranged variably so that the resulting fenestration complies exactly with the user's requirements. Both parts are sterile packed and belong together as a set. The drape is used for the sterile demarcation of the operation field. The external layer consists of a wet-strength non-woven which is extremely absorbent and can rapidly absorb liquid. The inner layer is made of a very dense material which is impermeable to moisture, thus providing a reliable barrier protection.

Composition

Polyethylene, viscose, polyester

Normative and Legal Requirements

NOBADRAPE[®]-variables Lochtuch is a medical product in accordance with the MDD, class Is, rule 1, and complies with the requirements of the directive 93/42/EEC and of the **EN 13795**, "Surgical drapes, gowns and clean air suits, used as medical devices for patients, clinical staff and equipment" (requirements of the performance level 'high' and 'standard'). Sterilization of the product complies with DIN EN 11137.
