NOBAGEL®

Product Description and Purpose

NOBAGEL® is a sterile, moist and, at the same time, absorbent hydrogel wound dressing. It consists of a hydrous polymer matrix and is coated with a vapour-permeable layer of polyurethane. The wound healing is based on the principle of the moist wound treatment. Softened necrotic tissue is absorbed by the gel layer and then removed with the dressing. Epithelialisation and granulation are accelerated this way. For use on dry or superficially necrotic wounds (such as ulcer of the leg, decubital ulcer), superficial defects of the epidermis (such as abrasions, wounds following the removal of a splitskin graft), wounds at the epithelialisation stage. The dressing is changed in an atraumatic way. The cooling gel layer pads and supports the analgetic feeling. NOBAGEL® does not leave any residue in the wound.

Composition

Hydrogel consisting of a hydrous polymer matrix, polyurethane

Normative and Legal Requirements

NOBAGEL® is a medical product in accordance with MDD, class IIb, rule 4, and complies with the requirements of the directive 93/42/EEC.

Sterilization of the product complies with DIN EN 11137.

The product does not contain dangerous toxic substances according to REACH. It has CE marking and EN 980 labels on all its packaging.

Packaging

Primary packaging: paper packaging, aluminium coated

Secondary packaging: folding box made of cellulose

Tertiary packaging: carton made of cellulose

Storage

NOBAGEL® is to be stored in a dry and dust-free environment, protected against direct sunlight.
