NOBACOLLOID[®]

Product Description and Purpose

NOBACOLLOID[®] is a hydroactive wound dressing for moist wound treatment. The dressing consists of an absorbent hydrocolloid matrix which has been laminated on a breathable polyurethane film backing. The hydrocolloid matrix provides a very high absorbency of the wound exudate, causing the formation of a cohesive gel, while the breathable polyurethane film allows an excellent moisture vapor transmission. In this way an optimal moist wound environment is ensured which supports the wound healing process, and the risk of damaging the intact peri-wound area is minimized. NOBACOLLOID[®] can be left in place for up to seven days. NOBACOLLOID[®] may be used for the management of light to moderately exuding wounds, such as pressure sores and leg ulcers, as well as partial and full thickness wounds, donor sites, abrasions, trauma wounds, post-operative surgical wounds and superficial burns (1st and 2nd degree).

Composition

Carboxymethyl cellulose, PU, polyisobutylene, pectin, hydrocarbon resin, styrene-isoprene-styrene block copolymer, polybutene, paraffin

Normative and Legal Requirements

NOBACOLLOID[®] is a medical product in accordance with the MDD, class IIb, rule 7, and complies with the requirements of the directive 93/42/EEC.

Sterilization of the product complies with DIN EN 11137.

The product does not contain dangerous toxic substances according to REACH. It has CE marking and EN 980 labels on all its packaging.

Packaging

Primary packaging: paper-film packaging

Secondary packaging: folding box made of cellulose

Tertiary packaging: carton made of cellulose

Storage

To be stored in a dry and dust-free environment, protected against direct sunlight
